

NEXT STEPS TOWARDS SPERM WHALE CMP

Issue: Conservation Management Plans

1. Action requested

The Scientific Committee is invited to:

- a. **consider** the draft CMP on Sperm whale;
- b. **discuss** the next steps to finalise this CMP;
- c. **provide recommendations** to the Parties on this issue.

2. Background

During MOP6 and MOP8, Parties adopted Resolution 6.21 on “Species Conservation Management Plans” (CMPs) and Resolution 8.14 “Conservation Management Plans”, which are key to manage human activities affecting cetaceans in the Mediterranean Sea and to maintain a favourable conservation status throughout their historical range, based on the best available scientific knowledge. To date, four CMPs are under development for fin whales, Risso’s dolphins, common dolphins and bottlenose dolphins.

During the 15th Meeting of the Scientific Committee, The Scientific Committee prioritized drafting future CMPs on:

- Ziphius – to be led by Aurelie Moulins; and
- Sperm whale – to be led by Caterina Lanfredi

**DRAFT: ACCOBAMS CMP for
Mediterranean sperm whale
(*Physeter macrocephalus*)**

Executive Summary

TO BE FINALISED WHEN THE PLAN IS READY

DRAFT

1. Why a Conservation Management Plan is needed

- Rationales for the development of CMP

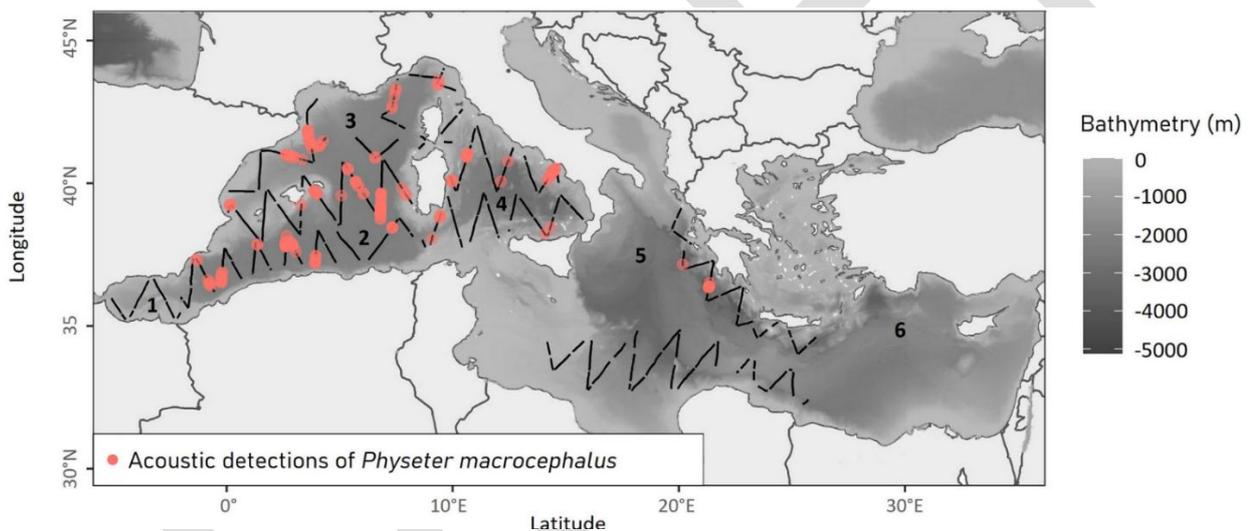

Main point to develop that warrant conservation concern over this population includes:

- Mediterranean sperm whales qualify as a subpopulation based on genetic data;
- The Mediterranean subpopulation is listed as Endangered [C2a(ii)] according to the recent IUCN assessment (Pirodda *et al.*, 2021) based on the following:
 - The size of the population is limited (contains fewer than 2,500 mature individuals);
 - A continuous decline of the subpopulation is inferred
 - Sperm whale survival in the ACCOBAMS area is threatened by several potential pressure/human activities (entanglement in nets, collisions with ships, pollution including noise, ingestion of plastic debris and disturbance from vessels - all contribute to the species' assumed decline - detailed in chapter 4).
- ..

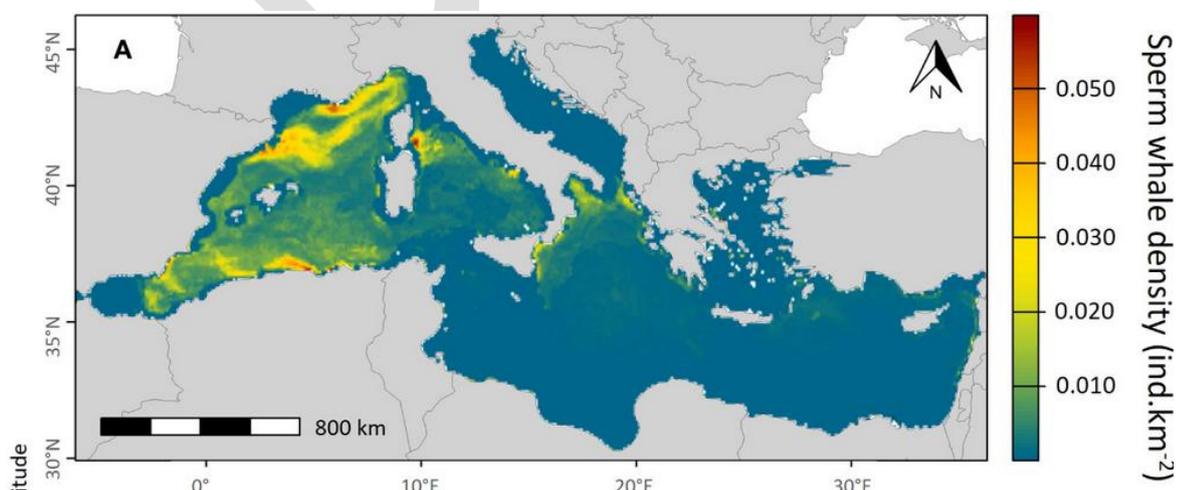

- Map of Geographical Range

Recent evidence from the analysis of ACCOBAMS Survey Initiative (ASI) data:

- Lerebourg, C., Boisseau, O., Ridoux, V. and Virgili, A., **2023**. Summer distribution of the Mediterranean sperm whale: insights from the acoustic Accobams survey initiative. *Frontiers in Marine Science*, 10, p.1229682. <https://doi.org/10.3389/fmars.2023.1229682>

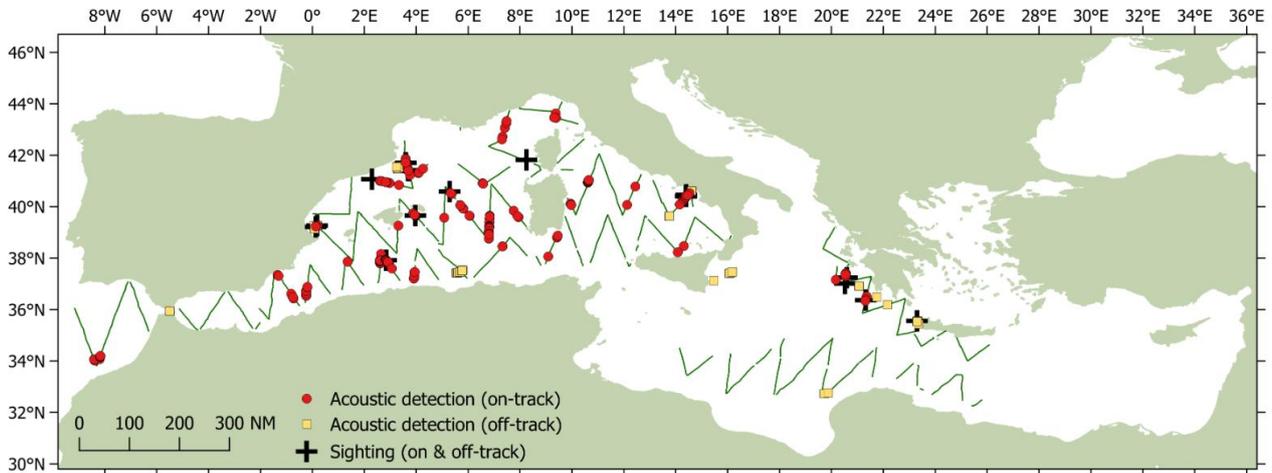

Performed effort transects and acoustic detections of sperm whales collected during the ASI survey in the Mediterranean Sea in 2018 (Larebourg *et al.*, 2023).

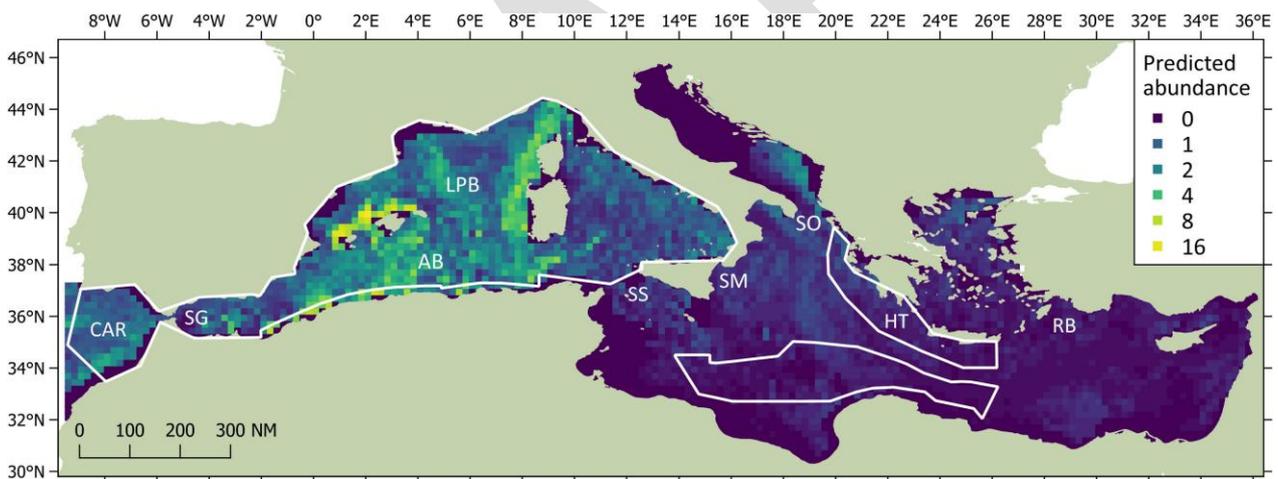

Mean predicted summer densities of sperm whales over the entire sampling period in individuals.km⁻² (June to September) (Larebourg *et al*, 2023).

- Boisseau, O., Reid, J., Ryan, C., Moscrop, A., McLanaghan, R. and Panigada, S., **2024**. Acoustic estimates of sperm whale abundance in the Mediterranean Sea as part of the ACCOBAMS Survey Initiative. *Frontiers in Marine Science*, 11, p.1164026. <https://doi.org/10.3389/fmars.2024.1164026>

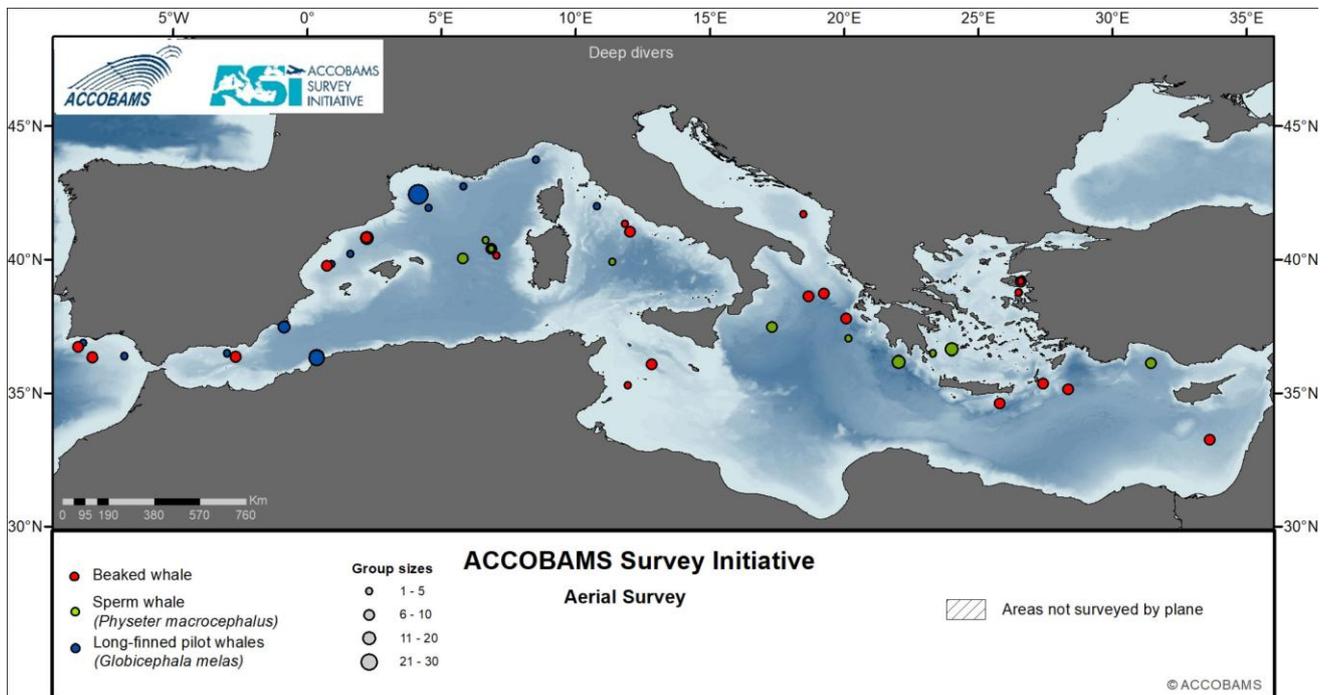

Sperm whale acoustic detections and sightings from *Song of the Whale* during the ASI survey (Boisseau *et al.*, 2024).

Predicted abundances of sperm whales (expressed as number of animals per grid cell) derived from Density Surface Modelling (Boisseau *et al.*, 2024).

- Cañadas, A., Pierantonio, N., Araujo, H., David, L., Di Meglio, N., Doremus, G., Gonzalvo, J., Holcer, D., Laran, S., Lauriano, G. and Perri, M., **2023**. Distribution patterns of marine megafauna density in the Mediterranean Sea assessed through the ACCOBAMS Survey Initiative (ASI). *Frontiers in Marine Science*, 10 p.1270917. <https://doi.org/10.3389/fmars.2023.1270917>

Observations of beaked whales, sperm whales and long-finned pilot whales (Cañadas et al., 2023)

- Future data will be available from an ongoing analysis at basin scale [Not published, Cañadas et al., 2024]
- Recognition of Range by countries

Recent IUCN Assessment (Mediterranean and European)

3.4 'ATTRIBUTES' OF THE POPULATION(S) TO BE MONITORED

4. SUMMARY OF ACTUAL AND POTENTIAL THREATS

4.1 ACTUAL AND POTENTIAL ANTHROPOGENIC THREATS

Mediterranean sperm whales face a broad spectrum of anthropogenic threats, at higher intensity than oceanic counterparts because of the confined and heavily used nature of Mediterranean waters. Activities that result in direct mortality, such as entanglement in illegal driftnets and collisions with ships, together with the noxious effects of noise, pollution, ingestion of debris, disturbance from whale watching operations, and possibly prey depletion and climate change (Pirodda *et al.*, 2021).

Notarbartolo di Sciara G., Tonay A. **2021**. *Conserving whales, dolphins and porpoises in the Mediterranean Sea, Black Sea and adjacent areas: an ACCOBAMS status report* (Monaco: ACCOBAMS).

Table 1

Initial draft summary of information on actual and potential threats

Actual/potential threat	Human activity	Strength of evidence	Possible impact	Priority for action	Relevant actions
Major threats (lethal or sub-lethal)					
Other threats					

4.1.2 ENTANGLEMENT

Blasi, M.F., Caserta, V., Bruno, C., Salzeri, P., Di Paola, A.I. and Lucchetti, A., **2021**. Behaviour and vocalizations of two sperm whales (*Physeter macrocephalus*) entangled in illegal driftnets in the Mediterranean Sea. *PloS one*, 16(4), p.e0250888. <https://doi.org/10.1371/journal.pone.0250888>

4.1.3 VESSEL STRIKES

Grossi, F., Lahaye, E., Moulins, A., Borroni, A., Rosso, M. and Tepsich, P., **2021**. Locating ship strike risk hotspots for fin whale (*Balaenoptera physalus*) and sperm whale (*Physeter macrocephalus*) along main shipping lanes in the North-Western Mediterranean Sea. *Ocean & Coastal Management*, 212, p.105820. <https://doi.org/10.1016/j.ocecoaman.2021.105820>

4.1.4 ANTHROPOGENIC NOISE

4.1.5 MARINE LITTER INGESTION
